

CHANDRIKA AREKUTI

Data Architect | Scalable ELT Pipelines | Google Cloud Platform Expert | Data Security

845-873-9666 • chandrikaarekuti@gmail.com • [LinkedIn](#)

Summary

Data Scientist with 4+ years of experience in machine learning and data analytics, expert in Python programming and SQL optimization. My key achievements include developing machine learning models that increased organic traffic by 25% and automating competitor analysis, reducing manual research time by 60%. Seeking a Data Engineer position at your company, where I bring my skills in data architecture and ELT pipeline development to support your mission of delivering scalable and efficient data solutions.

Key Achievements

SQL Optimization Success

Increased organic traffic by 25% through SQL optimization of data processing queries.

Python Programming Efficiency

Automated analysis in Python, reducing research time by 60% and enhancing project efficiency.

Python-Driven Engagement Boost

Achieved a 40% engagement improvement via optimized content strategies using Python-driven analytics.

Experience

	New Paltz Marketing Data Scientist Description - Developed machine learning models for SEO ranking prediction, increasing organic traffic by 25%. - Automated competitor analysis using Python, NLP, and web scraping, reducing manual research time by 60%. - Built an AI-driven content optimization tool, improving engagement rates by 40%. - Designed and implemented A/B testing frameworks, leading to a 15% boost in conversion rates. - Analyzed over 10 million website sessions, identifying user behavior patterns that optimized marketing strategies. - Created interactive dashboards in Power BI & Tableau, reducing reporting time by 30% and enhancing strategic decision-making.	New Paltz, United States 05/2024 - Present
	Wipro Project Engineer Description - Analyzed & processed 100M+ energy consumption records to optimize power usage forecasting models, improving accuracy by 25%. - Developed predictive analytics models for invoice discrepancy detection, reducing financial errors by 40%. - Built automated ETL pipelines to clean & structure large-scale energy data, reducing processing time by 60%. - Applied machine learning algorithms to detect anomalies in power consumption, identifying fraudulent usage patterns with 90% precision. - Designed interactive dashboards (Power BI & Tableau) for real-time energy insights, cutting manual reporting time by 50%. - Conducted data-driven optimizations on power billing, leading to a 15% cost reduction in operational expenses.	India 08/2021 - 07/2022
	ITC Limited Software Engineer Chilli crop (Export logistics Data Analytics) - Processed thousands of farmer records, enhancing data accuracy by 35%. - Built data pipelines for profiling, amplifying engagement by 30%. - Automated real-time dashboards (Power BI/Tableau), reducing reporting time by 50%. - Analyzed 10,000+ chili crop shipments, optimizing logistics by 20%. - Developed predictive models for demand forecasting, achieving accuracy by 25%. - Automated logistics tracking, decreasing processing time by 50%.	India 08/2019 - 07/2021

Education

Satate University of New york
Computer Science

08/2022 - 05/2024

Skills

Programming : Python · Automation · ETL · MLOps · SAS · JavaScript · Composer · Dataflow · GCP

Machine Learning · AI · Regression · Classification · Time-Series Forecasting · NLP · XGBoost · TensorFlow

SQL · Data Engineering · ETL · DBT · Snowflake · ETL Tools · BigQuery · Snowflake

A/B Testing · Feature Engineering · ML Model Deployment

Power BI, Matplotlib, Seaborn

Version Control: Git

Certification

AI ENGINEER FOR DATA SCIENTISTS ASSOCIATE - Data Camp

ASSOCIATE DATA SCIENTIST - Data Camp

Projects

Customer Segmentation Using K-means Clustering

New Paltz, United States

11/2023 - 12/2023

Description

- Developed a customer segmentation model by integrating K-Means clustering with RFM analysis to identify high-value customer groups.
- Engineered Recency, Frequency, and Monetary (RFM) features from transactional data to quantify customer engagement and value.
- Performed data preprocessing, including outlier detection, feature scaling, and missing value imputation for optimal clustering.
- Used the Elbow Method and Silhouette Score to determine the optimal number of clusters, improving segmentation accuracy.
- Created data visualizations with Matplotlib and Seaborn to interpret cluster characteristics and business insights.
- Automated the pipeline using Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn) for scalable and reproducible analysis.
